

Here is a modified plan of Tony Cartwright's Arrowhead kite by Len Patten, who says:- A neat little kite with unlimited opportunity for "personalization" with your own colour scheme. It can be made from "odd pieces" and for that reason I have shown the arms and body in halves. It does not need a tail but can look attractive with one. Sizes are given for a 25% larger kite, but this design is not suitable for really large models. Make a paper pattern first. If you can't work in inches then 1 inch = 2.5 cm.

Upside down figures are for a 25% larger kite. Use 5/16" spreader.
