

SPLITTAIL

The next kite from Harm Van Veen is the SPLITTAIL. It is an ultralight kite for the lightest winds only. Use Tyvek or thin polythene. Spine and bowed spar of 1/8" dowel or split bamboo. Up and down scaling is possible.

On the first day of the Scheveningen Kite Festival 1981 there was in the early morning nearly zero wind. A red SPLITTAIL was the first kite to go up. Made of tissue paper and without central spine it is an excellent indoor kite, Slow walking keeps it airborne.
